

Green Thread: Our Environmental Stewardship Platform

At ARAMARK we have a deep respect for—and commitment to—preserving our environment. We are connecting and developing environmental stewardship programs and policies—called Green Thread—that weave throughout our business operations. These include sustainable food and agriculture, earth-friendly procurement, energy conservation, waste management, and buildings and system design.

Green Thread at UMPI

In conjunction with the University of Maine at Presque Isle, ARAMARK is committed to supporting sustainability initiatives on campus. Examples include:

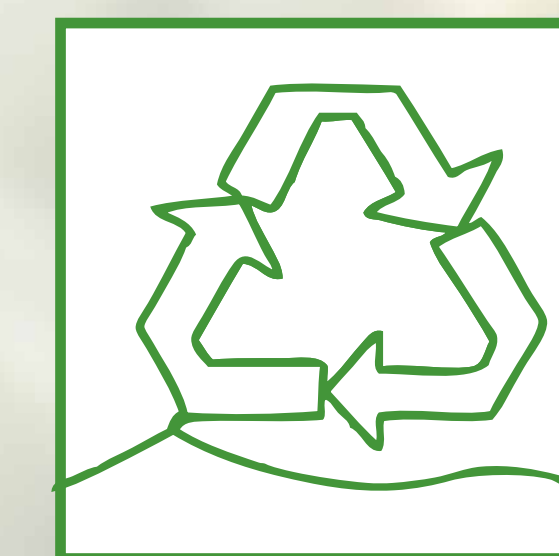

SUSTAINABLE FOOD

- We are consistently sourcing local produce and ingredients to support local farmers and businesses whenever possible.
- We purchase all of our frozen potato products from McCain's in Easton, ME.
- We serve New England Coffee.

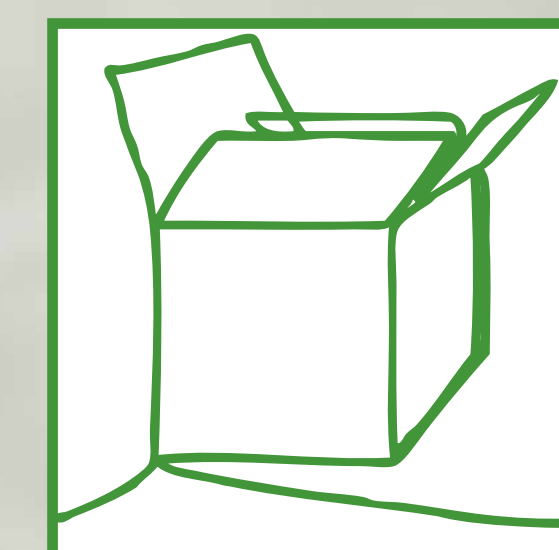

ENERGY AND WATER CONSERVATION

- We have gone trayless to conserve water and energy.
- On sunny days, we leave the lights off and use natural light in Kelley Commons.
- We converted all our cleaning supplies to the ECO Friendly APEX line from Ecolab. This product is less toxic to the environment; the packaging is smaller and recyclable.

WASTE MANAGEMENT

- We recycle all bottles, cans and cardboard.
- We use SCA brand 100% recycled napkins in all locations. These dispensers reduce napkin usage and related waste by 40%!
- We use Pitchers of water instead of bottles when we see the opportunity to do so.
- Our extra fry grease is turned into BIO DIESEL by a local resident.

RESPONSIBLE PROCUREMENT

- We buy 100% recycled printing paper for our office.
- We purchase in bulk to reduce packaging waste.

Unearthing our earthy side.

INVOLVED . EVOLVING.™
